

# Networks and Actors in the Mühleholz and Ebenholz Neighborhood

## Independent Study

This Independent Study is part of the Erasmus+ project “Socio-Eco-Hoods” and supports the preparatory work for participatory activities in the Liechtenstein work package. It centers on stakeholder mapping in the Mühleholz/Ebenholz neighborhood, aiming to identify and analyze key actors that shape spatial and social developments.

Students will map associations, community initiatives, municipal organizations, or informal networks to understand their roles, interests, and interrelations—and reflect on the role the University could play in neighborhood development. Methods may include semi-structured interviews, stakeholder analysis, and visual mapping techniques. The outcome will be a clear and usable overview of the local actor landscape, supporting future collaboration, co-creation, and public engagement in the design studio and workshops. This study provides a useful tool to situate the university within the neighborhood and enhances students’ skills in actor analysis for design and participation processes.

**WHEN** Individual appointments with the instructors Johannes Herburger and Cornelia Faisst

**ASSESSMENT** Written Assignment (20,000 to approx. 30,000 characters (incl. spaces)) and Oral Presentation

**CREDITS** 4 ECTS
